RDP Connection for Mac's

The following steps will allow you to connect to the Remote Desktop Server (Terminal Server) server from off-campus:

1. Go to https://view.rctc.edu in a web browser of your choice
2. Click the link “View Client (10 MB), see below

3. You will then see the below window, click on “Agree”
4. You will then see the below window, drag the VMware View Client for the Applications folder
5. Once the VMWare View Client copies to your Applications folder, go to the Applications Folder and find the VMWare View Client, it will look similar to the picture below.

6. When you launch the software for the first time, you will see the below window. Click on “Open”
7. When you see the below window click on the plus to “Add Server”

![Add Server Window]

8. The Hostname which is the remote server you want to connect to is view.rctc.edu

![Hostname Input Window]
9. When you try and connect to the server you will see the below error. In the top menu click on VMware View Client, then click on Preferences

10. When you click on Preferences as the last step indicated you should see the below picture. You should select “Not Secure” and then click “Continue”
11. You will then see the below window, enter in your user name and password as if you were on campus to log into your work computer. Then click “Connect”

12. You will then see the below screen. Click on the Employee RDS icon.
13. You will then see the below window, click “Always Allow” the screen should then look similar to as if you were here on campus.
